TITLE : Distene Deposits of South Carpathians --
A New Natural Source for Linoleic Acid

ORIG. PUB. : Rev. minerol., 1958, 9, No 9, 410-414

ABSTRACT : The crystalline deposits of distene, which, according to the author, are a new natural source for the recovery of linoleic acid, and also, as a by-product, of Ga, Ge, Ti, and In. The main rock-forming minerals are distene (15-20%), sillimanite, almandine, muscovite, biotite, tourmaline, quartz, microcline, plagioclase. Mineralogical characteristics and paragenetic associations of distene, in the different deposits, are described. Chemical analysis are given, results of qualitative spectrographic analysis: elements -- Al, K, Na, Cr, Ti, Ga, Ti, Fe, Mn, Mg; Cobalt -- Al, S, Na, Cr, Ti, Ga, Ge, Fe, Zn, Mg; Fugurash -- Al, K, Na, Cr, Ti, Fe, Mn, Mg. -- I. Lipova.

AUTHOR: Maier, M., Candidate of Physico-Mathematical Sciences

TITLE: Elementary Particles

PERIODICAL: Stiință și Tehnică, 1959, Vol 11, Seria a II-a, Nr 6, pp 16-19, (RUM)

ABSTRACT: This article gives a brief introduction to the field of nuclear and sub-atomic physics. The author sketches the development of nuclear physics and the behaviour of sub-atomic particles, such as: protons, electrons, neutrons, neutrinos, photons, leptons, various types of mesons and hyperons. The names of several nuclear physicists, among them the Soviet scientist D. D. Ivanenko, are mentioned. There is 1 drawing.

Title : An Experimental Study of the Biliary Function of the
Liver after Resection of the Stomach.

Orig Pub : Med. interna, 1957, 9, No 2, 220-230

Abstract : Surgical resection of the stomach in dogs changed the
mechanism of bile evacuation into the intestine.
These modifications in the evacuation of bile were
depending on changes in bile secretion by hepatic cells,
changes in the bile bladder (atonia) and a prolonged re-
laxation of Oddi's sphincter.

TITLE: Post-operational testicular atrophy

SOURCE: Revista sanitara militara, v. 61, no. 1, 1965, 3-7

TOPIC TAGS: surgery, biologic reproduction

ABSTRACT: The authors observed 59 cases of sterility and sexual insufficiency following operations for inguinal hernia or other conditions, and present selected case histories to illustrate the consequences of injuries to the testicular parenchyma. They emphasize the danger that bilateral surgical interventions may damage both gonads, bringing about changes in the functional behavior of the opposite testicle, affecting sexual activity and fecundity and inducing the "castration syndrome". TITLE: Medical-military considerations in the Klinefelter syndrome

SOURCE: Revista sanitara militara, no. 5, 1964, 809-814

TOPIC TAGS: military medicine, genitourinary system disease

ABSTRACT: After a general discussion of the Klinefelter syndrome from the point of view of frequency, clinical and biological data, diagnosis, etc., the authors consider its effects on military personnel and conclude that persons suffering from this syndrome in its normal form are suited for army service in non-combatant units only, while severe cases should only be accepted in time of war.

conditioned responses in comparison with unconditioned responses is connected with a negative induction from cortex to subcortical levels. In the weak type of male with testicular hypofunction testosterone therapy gives rise to changes in higher nervous activity corresponding to that manifested in the strong subject.

Title : Dermato-Hormonal Treatment with Testolysate in Neuroses Associated with Sexual Insufficiency in Males

Orig Pub : Comun. Acad. RPR, 1955, 5, No 10, 1539-1543

Abstract : The authors applied protein testicular extract (testolysate) intracutaneously in the cervical region to 25 patients suffering from asthenic neurosis associated with sexual insufficiency. Positive results were obtained in 19 patients and in 16 of these a simultaneous normalization of the sexual function was noted. Of 10 patients whose sperm was examined, in 7 an increase of the amount of spermatozoa was observed. It is considered that testolysates, besides a specific action, have areflex effect which beneficially influences the metabolism and trophicity of the neural tissue.

morphology of the soil is described, and data is given on the determination of the mechanical composition, pH, humus content of the water-soluble salt, gypsum, CO₂ of carbonates, active forms of N, P, and K, and the state of the absorbed bases. Features of the described soils, which are similar to the gray-brown soil of Ust'-Urt Plateau and Mongolia, are noted. It is shown that cultivation of agricultural plants and woody plants is possible on the gray-brown soils surrounding Issyk-Kul'. --

Title : Some Characteristics of Soil Evolution on the Dobrudzha
Hilly Plain Between Poarta Alba and Constanta.

Orig Pub : Probl. agric., 1956, 8, No 11, 13-26.

Abstract : An examination is made of the characteristics of chestnut and chernozem soil formation under "plakornyie" conditions of the hills, slopes, and in river valleys. Despite similar soil-forming rocks lime stone eluvia, the differing relief conditions have given rise to soils of differing maturity within the confines of Dobrudzha. Black steppe soils (rendzines and pseudo-rendzines) and swampy soils are also encountered here. Data are given for determining pH, humus, N, P_2O_5 , and metabolism bases in soils.

TITLE: Landslide at Miksova

SOURCE: Geograficky casopis, no. 4, 1965, 319-328

TOPIC TAGS: physical geology, soil behavior, hydrology

ABSTRACT: During excavation work a considerable landslide occurred on a supplying canal of the Miksova cascade. The sliding material, of older Quaternary terraces, menaced the canal. The main causes of the landslide are the geological structure of the territory, the composite hydrogeological conditions and erosive action of the Waag. The land should be stabilized temporarily with sumps and finally by a drainage adit in front of the landslide. Orig. art. has: 4 figures. [JPRS]

Fifty mice of inbred strain were exposed to smoke of cigarettes for 100-150 days, each day 4 times for 20-25 min. Results: (1) tobacco smoke when inhaled for a short period of time can produce an inflammatory reaction in the parenchymal tissue of the lung, often of a transient character; (2) after the first weeks much blood-derived pigment is deposited in the parenchymal tissue and the alveolar cells; (3) there is a marked difference in the histological pictures after short and long periods of inhalation. Longer exposure is characterized by (a) absence of inflammatory reaction, (b) occurrence of small extravasations in the lung parenchyma, and (c) transformation of the alveolar cells, with proliferation of them into the lumen of the alveoli.

Mahler, Kurt. On the minima of compound quadratic forms. Czechoslovak Math. J. 5(80) (1955), 180-193.

(Russian summary)

[The second last review is quoted as I]. Let (a_{hk}) be symmetric and let $F(X) = \sum_{h,k=1}^n a_{hk} x_h x_k$ be positive definite. Then $(\alpha_{\eta\mu}^{(p)})$ also is symmetric and $\Phi^{(p)}(\Xi) = \sum_{\eta,\mu=1}^n \alpha_{\eta\mu}^{(p)} \xi_\eta \xi_\mu$ is also positive definite. Let $0 < m_1 \leq m_2 \leq \dots \leq m_n$ [$0 < \mu_1^{(p)} \leq \dots \leq \mu_N^{(p)}$] denote the successive minima of $F(X)$ in L_0 [of $\Phi^{(p)}(\Xi)$ in Λ_0]. Define M_k as in I. Let G_n denote the unit sphere in R_n . Theorem 1: $\Delta(G_n)^{2p} M_k \leq \mu_k^{(p)} \leq M_k$ [$k=1, 2, \dots, N$]. It implies Theorem 2: $\Delta(G_n)^{2p} m_1^p \leq \mu_1^{(p)} \leq \Delta(G_n)^{-2p} m_1^{(n-p)/(n-1)}$ if $|\alpha_{hk}|=1$. Theorem 3: $\Delta(G_n)^{2N} \leq \mu_\eta^{(p)} \mu_{N-\eta+1}^{(n-p)} \leq \Delta(G_n)^{-2}$ [$\eta=1, 2, \dots, N$]. The final Theorem 4 shows that Theorem 3 of I holds with $c_\gamma = n^{-p/2} \Delta(G_n)^p$ if $L = L_0$, $\Lambda = \Lambda_0$.
